**Subject:** New outfalls and navigation locks

Hi Courtney,

I had a few questions from the USACE on the Lower Columbia River dams. Can you verify the following?

1. The Dalles Dam has 4 outfalls they don't need coverage for anymore. Can they send me an email requesting they don't need coverage, and we add to permit file?
2. The Dalles Dam has a new outfall they want coverage for. It's constructed but not yet operating. Do they need to send an updated application for coverage? What does that involve and what form needs to be completed? Could they just send relevant information in an email? This is a new outfall with a wastestream.
3. Bonneville is constructing a new outfall that may be finished in 2020 or later. This will be a new outfall and new wastestream. What's needed from the facility for us to process? Same as above or should they wait until the next permit cycle?
4. The Dalles Dam plans to decommission several outfalls in the next few years. What's the process for them to let us know and to withdraw permit coverage for those outfalls so they don't have to keep reporting in ICIS?

Lastly, I'll want to talk with you on the navigation locks. It might be helpful to talk with the Corps' attorneys on their definition of what does and doesn't constitute a wastestream that's regulated under NPDES for navigation locks.
